Forecast for Monday 04 Nov 2024

Weather: Cloudy but largely remaining dry, with a few spots of drizzle where cloud thick enough, most likely for southeast or eastern facing hills. Local cloud breaks developing in the west, with some higher summits elsewhere likely lying above the cloud layer. Rather mild, even at height.

Chance of cloud-free hill tops above 800m: 20% in the east. 20% becoming around 60% in the west.

Low Cloud and visibility: Extensive cloud with tops of 800-1000m and bases around 400m. Some lower cloud bases likely over southern and eastern hills. Cloud bases rising in the east to lie 500-600m, with many routes remaining shrouded by cloud throughout, although higher tops expected to peak above the cloud at times. In the west and northwest of the park, cloud breaks are expected to develop more widely. Cloud lowering during the evening, with patches of valley fog forming where skies remain clearer overnight. Visibility good or very good away from cloud, otherwise falling moderate to poor in any drizzle and very poor in late fog.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Feeling rather cold on higher summits in cloud, but warmer where tops peak above the cloud layer.

Forecast for Tuesday 05 Nov 2024

Weather: Staying cloudy for most with the best of any bright or sunny spells primarily in the north or northwest. Valley mist or fog clearing by late-morning, but likely to reform under slack flow during hours of darkness. Most places staying dry, with patchy drizzle where cloud is thicker, and perhaps more widely across western areas during the afternoon.

Maximum wind: South or southeast 5-10mph.

Chance of cloud-free hill tops above 800m: 30% rising to 50%. But 70% in the north and northwest.

Low Cloud and visibility: Periods of extensive cloud with cloud tops around 800m and bases 450-600m. Some patchy cloud below this, mainly in association with drizzle. Taller summits may sit above the cloud layer, even if routes to these peaks are often shrouded in cloud. Visibility good, but poor in drizzle and very poor in mist or fog.

Temperature: **Valleys:** Plus 7 Celsius rising to Plus 14 Celsius
At 800m: Plus 5 or 6 Celsius, around Plus 9 Celsius where tops lie above the cloud layer.
Freezing level: Above the summits.

Friday	Similar to Thursday, some bright or even sunny spells, especially in north, but still a lot of cloud around. Occasionally fresh southerly breeze. Feeling a little cooler at height. Freezing level around 1500m later.
